Hochschild cohomology for a class of some self-injective special biserial algebras of rank four

Takahiko Furuya[1]

School of Dentistry, Meikai University, 1-1 Keyakidai, Sakado, Saitama, Japan

Abstract

In this paper, we construct an explicit minimal projective bimodule resolution of a self-injective special biserial algebra A_T ($T \geq 0$) whose Grothendieck group is of rank 4. As a main result, we determine the dimension of the Hochschild cohomology group $\mathrm{HH}^i(A_T)$ of A_T for $i \geq 0$, completely. Moreover we give a presentation of the Hochschild cohomology ring modulo nilpotence $\mathrm{HH}^*(A_T)/\mathcal{N}_{A_T}$ of A_T by generators and relations in the case where $T = 0$.

Keywords: Hochschild cohomology, self-injective algebra, Koszul algebra.

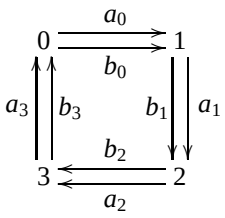
1. Introduction

Let Γ be the following circular quiver with four vertices 0, 1, 2, 3 and eight arrows a_i, b_i for $i = 0, 1, 2, 3$:



Denote the trivial path corresponding to the vertex i by e_i for $0 \leq i \leq 3$. We always consider the subscripts i of e_i, a_i and b_i as modulo 4. Therefore the arrows a_i and b_i start at e_i and end with e_{i+1} for all $i \in \mathbb{Z}$. Paths are written from left to right.

Let K be an algebraically closed field, and let $K\Gamma$ be the path algebra of Γ over K. We set $x := \sum_{i=0}^{3} a_i \in K\Gamma$ and $y := \sum_{i=0}^{3} b_i \in K\Gamma$. Then, for integers $0 \leq i \leq 3$ and $j \geq 0$, the elements $e_i x^j$ and $e_i y^j$ are precisely the paths $a_i a_{i+1} \cdots a_{i+j-1}$ and $b_i b_{i+1} \cdots b_{i+j-1}$ of length j respectively, so that $e_i x^j = e_i x^j e_{i+j} = x^j e_{i+j}$ and $e_i y^j = e_i y^j e_{i+j} = y^j e_{i+j}$ hold. Fix an integer $T \geq 0$, and let I_T be the ideal in $K\Gamma$ generated by the elements xy, $x^{4T+2} + y^{4T+2}$ and yx, that is, $I_T := \langle xy,\ x^{4T+2} + y^{4T+2},\ yx \rangle$. Define the algebra A_T to be the quotient $K\Gamma/I_T$. We then see that the set $\{e_i x^j,\ e_i y^l \mid 0 \leq i \leq 3;\ 0 \leq j \leq 4T+2;\ 1 \leq l \leq 4T+1\}$ is a K-basis of A_T, so that $\dim_K A_T = 16(2T+1)$. Furthermore A_T is a self-injective special biserial algebra, and hence is of tame representation type. In particular, if $T = 0$, then we see that A_0 is a Koszul algebra of radical cube zero (see Proposition 2.3).

The purpose in this paper is to investigate the Hochschild cohomology for A_T. The Hochschild cohomology groups and rings of algebras are important invariants in the representation theory of algebras, and have been studied by many researchers. However, in general, it is not easy to describe their structures, even if the given algebras are easier to deal with.

Recently, in the papers [2, 10, 12, 14], the Hochschild cohomology groups or rings of certain finite-dimensional self-injective algebras were described, where the authors provided projective bimodule resolutions by using certain sets $\mathcal{G}^n$ found in [9]. These sets are also used in the papers [4, 5, 6] in constructing projective bimodule resolutions.

[1]E-mail address: furuya@dent.meikai.ac.jp

In this paper, following this technique, we give a projective bimodule resolution of A_T for all $T \geq 0$, and then study its Hochschild cohomology.

One important problem in the study of Hochschild cohomology is to find necessarily and sufficient conditions for the Hochschild cohomology ring modulo nilpotence to be finitely generated as an algebra. So far it has been proved that the Hochschild cohomology rings modulo nilpotence for several classes of finite-dimensional algebras, such as group algebras [3, 15], self-injective algebras of finite representation type [7], monomial algebras [8], are finitely generated. Also, some examples of infinitely generated Hochschild cohomology rings modulo nilpotence can be found in [11, 16]. However, a definitive answer to this problem has not yet been obtained. In this paper, we show that the Hochschild cohomology ring modulo nilpotence of A_T is finitely generated in the case where $T = 0$.

This paper is organized as follows: In Section 2, we construct sets $\mathcal{G}^n$ ($n \geq 0$) for the right A_T-module $A_T/\mathfrak{r}_{A_T}$, and then give an explicit minimal projective bimodule resolution of A_T. In Section 3, we find a K-basis of the Hochschild cohomology group $\mathrm{HH}^i(A_T)$ ($i \geq 0$) of A_T for all $T \geq 0$, and then determine its dimension, completely. In Section 4, we give a presentation by generators and relations of the Hochschild cohomology ring modulo nilpotence $\mathrm{HH}^*(A_T)/\mathcal{N}_{A_T}$ in the Koszul case, $T = 0$, and show that $\mathrm{HH}^*(A_0)/\mathcal{N}_{A_0}$ is finitely generated.

For every arrow c in Γ, we denote the origin by $\mathfrak{o}(c)$ and the terminus by $\mathfrak{t}(c)$. For simplicity we write $\otimes_K$ as $\otimes$. Moreover we denote the enveloping algebra $A_T^{\mathrm{op}} \otimes A_T$ of A_T by A_T^{e}. Note that there is a natural one to one correspondence between the family of A_T-A_T-bimodules and that of right A_T^{e}-modules. We also denote the Jacobson radical of A_T by $\mathfrak{r}_{A_T}$.

2. The sets $\mathcal{G}^n$ and a projective bimodule resolution $(Q^\bullet, \partial)$ of A_T

Let $\Lambda = KQ/I$ be any finite-dimensional K-algebra with Q a finite quiver, and I an admissible ideal in KQ, and let $\mathfrak{r}_\Lambda$ be the Jacobson radical of Λ. We denote by $\mathcal{G}^0$ the set of all vertices of Q, by $\mathcal{G}^1$ the set of all arrows of Q, and by $\mathcal{G}^2$ a minimal set of uniform generators of I. In [9], Green, Solberg and Zacharia showed that, for each $n \geq 3$, there is a set $\mathcal{G}^n$ of uniform elements in KQ such that we have a minimal projective resolution $(P^\bullet, d)$ of the right Λ-module $\Lambda/\mathfrak{r}_\Lambda$ satisfying the following conditions:

(a) For $n \geq 0$, $P^n = \bigoplus_{x \in \mathcal{G}^n} \mathfrak{t}(x)\Lambda$.

(b) For $x \in \mathcal{G}^n$, there are unique elements $r_y, s_z \in KQ$, where $y \in \mathcal{G}^{n-1}$ and $z \in \mathcal{G}^{n-2}$, such that $x = \sum_{y \in \mathcal{G}^{n-1}} y r_y = \sum_{z \in \mathcal{G}^{n-2}} z s_z$.

(c) For $n \geq 1$, the differential $d^n : P^n \to P^{n-1}$ is defined by $d^n(\mathfrak{t}(x)\lambda) := \sum_{y \in \mathcal{G}^{n-1}} r_y \mathfrak{t}(x)\lambda$ for $x \in \mathcal{G}^n$ and $\lambda \in \Lambda$, where r_y denotes the element in the expression (b).

In this section, we will construct sets $\mathcal{G}^n$ ($n \geq 0$) for the right A_T-module $A_T/\mathfrak{r}_{A_T}$, and then use them to give a projective bimodule resolution $(Q^\bullet, \partial)$ of A_T.

2.1. Sets $\mathcal{G}^n$ for $A_T/\mathfrak{r}_{A_T}$

First, in order to give sets $\mathcal{G}^n$ ($n \geq 0$) for $A_T/\mathfrak{r}_{A_T}$, we introduce the following elements in $K\Gamma$:

Definition 2.1. For $0 \leq i \leq 3$, we put $g_{i,0}^0 := e_i$. Furthermore, for $n \geq 1$, we inductively define the elements $g_{i,j}^n \in K\Gamma$ for $0 \leq i \leq 3$ and $0 \leq j \leq n$ as follows:

(a) If $n = 2m + 1$ with $m \geq 0$, then

$$g_{i,j}^{2m+1} := \begin{cases} g_{i,0}^{2m} x & \text{if } i = 0, 2 \text{ and } j = 0 \\ g_{i,0}^{2m} y & \text{if } i = 1, 3 \text{ and } j = 0 \\ g_{i,j-1}^{2m} y^{4T+1} + g_{i,j}^{2m} x & \text{if } i = 0, 2 \text{ and } 1 \leq j \leq m \\ g_{i,j-1}^{2m} x^{4T+1} + g_{i,j}^{2m} y & \text{if } i = 1, 3 \text{ and } 1 \leq j \leq m \\ g_{i,j-1}^{2m} y + g_{i,j}^{2m} x^{4T+1} & \text{if } i = 0, 2 \text{ and } m+1 \leq j \leq 2m \\ g_{i,j-1}^{2m} x + g_{i,j}^{2m} y^{4T+1} & \text{if } i = 1, 3 \text{ and } m+1 \leq j \leq 2m \\ g_{i,2m}^{2m} y & \text{if } i = 0, 2 \text{ and } j = 2m+1 \\ g_{i,2m}^{2m} x & \text{if } i = 1, 3 \text{ and } j = 2m+1. \end{cases}$$

(b) If $n = 2m$ with $m \geq 1$, then

$$g_{i,j}^{2m} := \begin{cases} g_{i,0}^{2m-1} y & \text{if } i = 0, 2 \text{ and } j = 0 \\ g_{i,0}^{2m-1} x & \text{if } i = 1, 3 \text{ and } j = 0 \\ g_{i,j-1}^{2m-1} x^{4T+1} + g_{i,j}^{2m-1} y & \text{if } i = 0, 2 \text{ and } 1 \leq j \leq m-1 \\ g_{i,j-1}^{2m-1} y^{4T+1} + g_{i,j}^{2m-1} x & \text{if } i = 1, 3 \text{ and } 1 \leq j \leq m-1 \\ g_{i,m-1}^{2m-1} x^{4T+1} + g_{i,m}^{2m-1} y^{4T+1} & \text{if } i = 0, 2 \text{ and } j = m \\ g_{i,m-1}^{2m-1} y^{4T+1} + g_{i,m}^{2m-1} x^{4T+1} & \text{if } i = 1, 3 \text{ and } j = m \\ g_{i,j-1}^{2m-1} x + g_{i,j}^{2m-1} y^{4T+1} & \text{if } i = 0, 2 \text{ and } m+1 \leq j \leq 2m-1 \\ g_{i,j-1}^{2m-1} y + g_{i,j}^{2m-1} x^{4T+1} & \text{if } i = 1, 3 \text{ and } m+1 \leq j \leq 2m-1 \\ g_{i,2m-1}^{2m-1} x & \text{if } i = 0, 2 \text{ and } j = 2m \\ g_{i,2m-1}^{2m-1} y & \text{if } i = 1, 3 \text{ and } j = 2m. \end{cases}$$

We immediately see that these elements $g_{i,j}^n$ are uniform.

Now we put the set

$$\mathcal{G}^n := \left\{ g_{i,j}^n \,\middle|\, 0 \leq i \leq 3;\ 0 \leq j \leq n \right\}$$

for all $n \geq 0$.

Remark 2.2. (a) For all $n \geq 0$, $0 \leq i \leq 3$ and $0 \leq j \leq n$, we have $\mathfrak{o}(g_{i,j}^n) = e_i$. Also, if $i + n \equiv t \pmod 4$, then $\mathfrak{t}(g_{i,j}^n) = e_t$.

(b) We get

$$\begin{aligned} \mathcal{G}^0 &= \{e_i \mid 0 \leq i \leq 3\}, \\ \mathcal{G}^1 &= \{a_i,\ b_i \mid 0 \leq i \leq 3\}, \\ \mathcal{G}^2 &= \left\{ e_i xy,\ e_i(x^{4T+2} + y^{4T+2}),\ e_i yx \,\middle|\, 0 \leq i \leq 3 \right\}, \end{aligned}$$

and so $\mathcal{G}^2$ is a minimal set of generators of I_T.

It is not hard to check that these sets satisfy the conditions (a), (b), and (c) in the beginning of this section.

Now it can be seen that, for all $T \geq 0$, A_T is a self-injective algebra. Moreover, if $T = 0$, then we have the following proposition.

Proposition 2.3. *The algebra A_0 is a self-injective Koszul algebra.*

Proof. If $T = 0$, then we notice that the resolution $(P^\bullet, d)$ determined by (a), (b) and (c) above is a linear resolution of $A_0/\mathfrak{r}_{A_0}$, and hence A_0 is a Koszul self-injective algebra. □

2.2. A projective bimodule resolution of A_T

Now we give a projective bimodule resolution $(Q^\bullet, \partial)$ for A_T. For simplicity we denote the element $\mathfrak{o}(g_{i,j}^n) \otimes \mathfrak{t}(g_{i,j}^n)$ in $A_T \mathfrak{o}(g_{i,j}^n) \otimes \mathfrak{t}(g_{i,j}^n) A_T$ by $\mathfrak{a}_{i,j}^n$ for $n \geq 0$, $0 \leq i \leq 3$, and $0 \leq j \leq n$. For $n \geq 0$, we define the projective A_T-A_T-bimodule Q^n by

$$Q^n := \bigoplus_{g \in \mathcal{G}^n} A_T \mathfrak{o}(g) \otimes \mathfrak{t}(g) A_T = \bigoplus_{i=0}^{3} \left[\bigoplus_{j=0}^{n} A_T \mathfrak{a}_{i,j}^n A_T \right].$$

Furthermore we define the map ∂^n as follows:

Definition 2.4. Define $\partial^0 : Q^0 \to A_T$ to be the multiplication map, and for $n \geq 1$ define $\partial^n : Q^n \to Q^{n-1}$ to be the homomorphism of A_T-A_T-bimodules determined by the following formulas. Here, we note that the lower left subscripts i of $\mathfrak{a}_{i,j}^n$ are considered as modulo 4.

(a) If $n = 2m+1$ for $m \geq 0$, then, for $0 \leq i \leq 3$ and $0 \leq j \leq 2m+1$,

$$\partial^{2m+1}(\mathfrak{a}^{2m+1}_{i,j}) := \begin{cases} \mathfrak{a}^{2m}_{i,0}x - x\mathfrak{a}^{2m}_{i+1,0} & \text{if } i = 0,2 \text{ and } j = 0 \\ \mathfrak{a}^{2m}_{i,0}y - y\mathfrak{a}^{2m}_{i+1,0} & \text{if } i = 1,3 \text{ and } j = 0 \\ \mathfrak{a}^{2m}_{i,j-1}y^{4T+1} + \mathfrak{a}^{2m}_{i,j}x - x\mathfrak{a}^{2m}_{i+1,j} - y^{4T+1}\mathfrak{a}^{2m}_{i+1,j-1} & \text{if } i = 0,2 \text{ and } 1 \leq j \leq m \\ \mathfrak{a}^{2m}_{i,j-1}x^{4T+1} + \mathfrak{a}^{2m}_{i,j}y - y\mathfrak{a}^{2m}_{i+1,j} - x^{4T+1}\mathfrak{a}^{2m}_{i+1,j-1} & \text{if } i = 1,3 \text{ and } 1 \leq j \leq m \\ \mathfrak{a}^{2m}_{i,j-1}y + \mathfrak{a}^{2m}_{i,j}x^{4T+1} - x^{4T+1}\mathfrak{a}^{2m}_{i+1,j} - y\mathfrak{a}^{2m}_{i+1,j-1} & \text{if } i = 0,2 \text{ and } m+1 \leq j \leq 2m \\ \mathfrak{a}^{2m}_{i,j-1}x + \mathfrak{a}^{2m}_{i,j}y^{4T+1} - y^{4T+1}\mathfrak{a}^{2m}_{i+1,j} - x\mathfrak{a}^{2m}_{i+1,j-1} & \text{if } i = 1,3 \text{ and } m+1 \leq j \leq 2m \\ \mathfrak{a}^{2m}_{i,2m}y - y\mathfrak{a}^{2m}_{i+1,2m} & \text{if } i = 0,2 \text{ and } j = 2m+1 \\ \mathfrak{a}^{2m}_{i,2m}x - x\mathfrak{a}^{2m}_{i+1,2m} & \text{if } i = 1,3 \text{ and } j = 2m+1. \end{cases}$$

(b) If $n = 2m$ for $m \geq 1$, then, for $0 \leq i \leq 3$ and $0 \leq j \leq 2m$,

$$\partial^{2m}(\mathfrak{a}^{2m}_{i,j}) := \begin{cases} \mathfrak{a}^{2m-1}_{i,0}y + x\mathfrak{a}^{2m-1}_{i+1,0} & \text{if } i = 0,2 \text{ and } j = 0 \\ \mathfrak{a}^{2m-1}_{i,0}x + y\mathfrak{a}^{2m-1}_{i+1,0} & \text{if } i = 1,3 \text{ and } j = 0 \\ \mathfrak{a}^{2m-1}_{i,j-1}x^{4T+1} + \mathfrak{a}^{2m-1}_{i,j}y + x\mathfrak{a}^{2m-1}_{i+1,j} + y^{4T+1}\mathfrak{a}^{2m-1}_{i+1,j-1} & \text{if } i = 0,2 \text{ and } 1 \leq j \leq m-1 \\ \mathfrak{a}^{2m-1}_{i,j-1}y^{4T+1} + \mathfrak{a}^{2m-1}_{i,j}x + y\mathfrak{a}^{2m-1}_{i+1,j} + x^{4T+1}\mathfrak{a}^{2m-1}_{i+1,j-1} & \text{if } i = 1,3 \text{ and } 1 \leq j \leq m-1 \\ \Big[\sum_{s=0}^{T} x^{4s}(\mathfrak{a}^{2m-1}_{i,m-1}x + x\mathfrak{a}^{2m-1}_{i+1,m})x^{4T-4s}\Big] & \\ \quad + \Big[\sum_{s=0}^{T-1} x^{4s+2}(\mathfrak{a}^{2m-1}_{i+2,m-1}x + x\mathfrak{a}^{2m-1}_{i+3,m})x^{4T-4s-2}\Big] & \\ \quad\quad + \Big[\sum_{s=0}^{T} y^{4s}(\mathfrak{a}^{2m-1}_{i,m}y + y\mathfrak{a}^{2m-1}_{i+1,m-1})y^{4T-4s}\Big] & \\ \quad\quad\quad + \Big[\sum_{s=0}^{T-1} y^{4s+2}(\mathfrak{a}^{2m-1}_{i+2,m}y + y\mathfrak{a}^{2m-1}_{i+3,m-1})y^{4T-4s-2}\Big] & \text{if } i = 0,2 \text{ and } j = m \\ \Big[\sum_{s=0}^{T} y^{4s}(\mathfrak{a}^{2m-1}_{i,m-1}y + y\mathfrak{a}^{2m-1}_{i+1,m})y^{4T-4s}\Big] & \\ \quad + \Big[\sum_{s=0}^{T-1} y^{4s+2}(\mathfrak{a}^{2m-1}_{i+2,m-1}y + y\mathfrak{a}^{2m-1}_{i+3,m})y^{4T-4s-2}\Big] & \\ \quad\quad + \Big[\sum_{s=0}^{T} x^{4s}(\mathfrak{a}^{2m-1}_{i,m}x + x\mathfrak{a}^{2m-1}_{i+1,m-1})x^{4T-4s}\Big] & \\ \quad\quad\quad + \Big[\sum_{s=0}^{T-1} x^{4s+2}(\mathfrak{a}^{2m-1}_{i+2,m}x + x\mathfrak{a}^{2m-1}_{i+3,m-1})x^{4T-4s-2}\Big] & \text{if } i = 1,3 \text{ and } j = m \\ \mathfrak{a}^{2m-1}_{i,j-1}x + \mathfrak{a}^{2m-1}_{i,j}y^{4T+1} + x^{4T+1}\mathfrak{a}^{2m-1}_{i+1,j} + y\mathfrak{a}^{2m-1}_{i+1,j-1} & \text{if } i = 0,2 \text{ and } m+1 \leq j \leq 2m-1 \\ \mathfrak{a}^{2m-1}_{i,j-1}y + \mathfrak{a}^{2m-1}_{i,j}x^{4T+1} + y^{4T+1}\mathfrak{a}^{2m-1}_{i+1,j} + x\mathfrak{a}^{2m-1}_{i+1,j-1} & \text{if } i = 1,3 \text{ and } m+1 \leq j \leq 2m-1 \\ \mathfrak{a}^{2m-1}_{i,2m-1}x + y\mathfrak{a}^{2m-1}_{i+1,2m-1} & \text{if } i = 0,2 \text{ and } j = 2m \\ \mathfrak{a}^{2m-1}_{i,2m-1}y + x\mathfrak{a}^{2m-1}_{i+1,2m-1} & \text{if } i = 1,3 \text{ and } j = 2m. \end{cases}$$

It is straightforward to check that the composite $\partial^n\partial^{n+1}$ is zero for all $n \geq 0$, so that $(Q^\bullet, \partial)$ is a complex of A_T-A_T-bimodules.

Remark 2.5. For $n \geq 0$, the map $G^n : A_T/\mathfrak{r}_{A_T} \otimes_{A_T} Q^n \to P^n$ determined by $G^n(\mathfrak{o}(g^n_{i,j}) \otimes_{A_T} \mathfrak{a}^n_{i,j}) = \mathfrak{t}(g^n_{i,j})$ $(0 \leq i \leq 3;\ 0 \leq j \leq n)$ is an isomorphism of right A_T-modules, and this map makes the following diagram commutative:

$$\begin{array}{ccc} A_T/\mathfrak{r}_{A_T} \otimes_{A_T} Q^{n+1} & \xrightarrow{A_T/\mathfrak{r}_{A_T} \otimes_{A_T} \partial^{n+1}} & A_T/\mathfrak{r}_{A_T} \otimes_{A_T} Q^n \\ {\scriptstyle G^{n+1}}\downarrow{\scriptstyle \simeq} & & {\scriptstyle \simeq}\downarrow{\scriptstyle G^n} \\ P^{n+1} & \xrightarrow{d^{n+1}} & P^n \end{array}$$

This shows that $(A_T/\mathfrak{r}_{A_T} \otimes_{A_T} Q^\bullet, A_T/\mathfrak{r}_{A_T} \otimes_{A_T} \partial)$ is isomorphic to $(P^\bullet, d)$ as complexes and hence is a minimal projective resolution of $A_T/\mathfrak{r}_{A_T} \otimes_{A_T} A_T$ $(\simeq A_T/\mathfrak{r}_{A_T})$.

Now we have the following theorem. The proof is done with Remark 2.5 and by following [6] (and see also [14]), so we omit it.

Theorem 2.6. *The complex $(Q^\bullet, \partial)$ is a minimal projective bimodule resolution of A_T.*

3. Hochschild cohomology groups of A_T

In this section we find an explicit K-basis of the Hochschild cohomology group $\mathrm{HH}^i(A_T)$ ($i \geq 0$) by using the resolution $(Q^\bullet, \partial)$ in Section 2, and then give the dimension of $\mathrm{HH}^i(A_T)$, completely. Throughout this section we keep the notation from Section 2.

By applying the functor $\mathrm{Hom}_{A_T^e}(-, A_T)$ to $(Q^\bullet, \partial)$, we have the complex

$$0 \longrightarrow \mathrm{Hom}_{A_T^e}(Q^0, A_T) \xrightarrow{\mathrm{Hom}_{A_T^e}(\partial^1, A_T)} \mathrm{Hom}_{A_T^e}(Q^1, A_T) \xrightarrow{\mathrm{Hom}_{A_T^e}(\partial^2, A_T)}$$

$$\mathrm{Hom}_{A_T^e}(Q^2, A_T) \xrightarrow{\mathrm{Hom}_{A_T^e}(\partial^3, A_T)} \mathrm{Hom}_{A_T^e}(Q^3, A_T) \xrightarrow{\mathrm{Hom}_{A_T^e}(\partial^4, A_T)} \cdots.$$

Recall that, for $n \geq 0$, the nth Hochschild cohomology group $\mathrm{HH}^n(A_T)$ of A_T is defined to be the K-space $\mathrm{HH}^n(A_T) := \mathrm{Ext}^n_{A_T^e}(A_T, A_T) = \mathrm{Ker}\,\mathrm{Hom}_{A_T^e}(\partial^{n+1}, A_T)/\mathrm{Im}\,\mathrm{Hom}_{A_T^e}(\partial^n, A_T)$.

3.1. A basis of $\mathrm{Hom}_{A_T^e}(Q^i, A_T)$

We start with the following remark:

Remark 3.1. (a) For integers $n \geq 0$, $0 \leq i \leq 3$ and $0 \leq j \leq n$, if $n \equiv t \pmod 4$, then, by Remark 2.2 (a), we get $\mathfrak{o}(g^n_{i,j})A_T\mathfrak{t}(g^n_{i,j}) = e_iA_Te_{i+t}$. Hence $\mathfrak{o}(g^n_{i,j})A_T\mathfrak{t}(g^n_{i,j})$ has a K-basis

$$\begin{cases} \{e_i\} & \text{if } T = 0 \text{ and } n \equiv 0 \pmod 4 \\ \{e_ix^{4l},\ e_iy^{4u} \mid 0 \leq l \leq T;\ 1 \leq u \leq T\} & \text{if } T \geq 1 \text{ and } n \equiv 0 \pmod 4 \\ \{e_ix^{4l+1},\ e_iy^{4l+1} \mid 0 \leq l \leq T\} & \text{if } n \equiv 1 \pmod 4 \\ \{e_ix^2\} & \text{if } T = 0 \text{ and } n \equiv 2 \pmod 4 \\ \{e_ix^{4l+2},\ e_iy^{4u+2} \mid 0 \leq l \leq T;\ 0 \leq u \leq T-1\} & \text{if } T \geq 1 \text{ and } n \equiv 2 \pmod 4 \\ \{e_ix^{4l+3},\ e_iy^{4l+3} \mid 0 \leq l \leq T-1\} & \text{if } T \geq 1 \text{ and } n \equiv 3 \pmod 4. \end{cases}$$

Moreover, $\mathfrak{o}(g^n_{i,j})A_T\mathfrak{t}(g^n_{i,j}) = \{0\}$, if $T = 0$ and $n \equiv 3 \pmod 4$.

(b) For $n \geq 0$ the map $F : \bigoplus_{g \in \mathcal{G}^n} \mathfrak{o}(g)A_T\mathfrak{t}(g) \to \mathrm{Hom}_{A_T^e}(Q^n, A_T)$ given by $(F(\sum_{g\in\mathcal{G}^n} z_g))(\mathfrak{a}^n_{i,j}) = z_{g^n_{i,j}}$, where $z_g \in \mathfrak{o}(g)A_T\mathfrak{t}(g)$ for $g \in \mathcal{G}^n$, $0 \leq i \leq 3$ and $0 \leq j \leq n$, is an isomorphism of K-spaces.

We need the following maps.

Definition 3.2. Let $n \geq 0$ be an integer. For $0 \leq i \leq 3$, $0 \leq j \leq n$ and $\begin{cases} 0 \leq l \leq T & \text{if } n \not\equiv 3 \pmod 4 \\ 0 \leq l \leq T-1 & \text{if } n \equiv 3 \pmod 4, \end{cases}$ we define the maps $\beta^{n,l}_{i,j}$, $\gamma^{n,l}_{i,j}$: $Q^n \to A_T$ to be the homomorphisms of A_T-A_T-bimodules determined by

$$\beta^{n,l}_{i,j}(\mathfrak{a}^n_{r,s}) := \begin{cases} e_ix^{4l+t} & \text{if } r = i,\ s = j \text{ and } n \equiv t \pmod 4 \text{ where } 0 \leq t \leq 3 \\ 0 & \text{otherwise} \end{cases}$$

and

$$\gamma^{n,l}_{i,j}(\mathfrak{a}^n_{r,s}) := \begin{cases} e_iy^{4l+t} & \text{if } r = i,\ s = j \text{ and } n \equiv t \pmod 4 \text{ where } 0 \leq t \leq 3 \\ 0 & \text{otherwise} \end{cases}$$

for $0 \leq r \leq 3$ and $0 \leq s \leq n$, respectively.

Note that, for $t \geq 0$ and $0 \leq i \leq 3$, we get $\beta^{4t,0}_{i,j} = \gamma^{4t,0}_{i,j}$ for $0 \leq j \leq 4t$ and $\beta^{4t+2,T}_{i,j} = -\gamma^{4t+2,T}_{i,j}$ for $0 \leq j \leq 4t+2$.

Then, by Remark 3.1, we immediately have a K-basis of $\mathrm{Hom}_{A_T^e}(Q^n, A_T)$:

Lemma 3.3. *Let $n \geq 0$ be an integer. Then*

$$\begin{cases} \{\beta_{i,j}^{n,0} \mid 0 \leq i \leq 3;\ 0 \leq j \leq n\} & \text{if } n \equiv 0 \pmod 4 \text{ and } T = 0 \\ \{\beta_{i,j}^{n,4l},\ \gamma_{i,j}^{n,4u} \mid 0 \leq i \leq 3;\ 0 \leq j \leq n;\ 0 \leq l \leq T;\ 1 \leq u \leq T\} & \text{if } n \equiv 0 \pmod 4 \text{ and } T \geq 1 \\ \{\beta_{i,j}^{n,4l+1},\ \gamma_{i,j}^{n,4l+1} \mid 0 \leq i \leq 3;\ 0 \leq j \leq n;\ 0 \leq l \leq T\} & \text{if } n \equiv 1 \pmod 4 \\ \{\beta_{i,j}^{n,2} \mid 0 \leq i \leq 3;\ 0 \leq j \leq n\} & \text{if } n \equiv 2 \pmod 4 \text{ and } T = 0 \\ \{\beta_{i,j}^{n,4l+2},\ \gamma_{i,j}^{n,4u+2} \mid 0 \leq i \leq 3;\ 0 \leq j \leq n;\ 0 \leq l \leq T;\ 0 \leq u \leq T-1\} & \text{if } n \equiv 2 \pmod 4 \text{ and } T \geq 1 \\ \{\beta_{i,j}^{n,4l+3},\ \gamma_{i,j}^{n,4l+3} \mid 0 \leq i \leq 3;\ 0 \leq j \leq n;\ 0 \leq l \leq T-1\} & \text{if } n \equiv 3 \pmod 4 \text{ and } T \geq 1 \end{cases}$$

gives a K-basis of $\mathrm{Hom}_{A_T^e}(Q^n, A_T)$. *Moreover,* $\mathrm{Hom}_{A_T^e}(Q^n, A_T) = \{0\}$, *if* $n \equiv 3 \pmod 4$ *and* $T = 0$.

In the rest of the paper, we consider the subscripts i of all maps $\beta_{i,j}^{n,l}$ and $\gamma_{i,j}^{n,l}$ as modulo 4.

3.2. Maps $\mathrm{Hom}_{A_T^e}(\partial^n, A_T)$

Now, by direct computations, we have the images of the basis elements in Lemma 3.3 under the map $\mathrm{Hom}_{A_T^e}(\partial^n, A_T)$:

Lemma 3.4. *For $m \geq 0$, we have the following*:

(a) *For $0 \leq i \leq 3$ and $0 \leq j \leq 4m+1$,*

$$\beta_{i,j}^{4m+1,0}\partial^{4m+2} = \begin{cases} \beta_{i,j+1}^{4m+2,T} + \beta_{i-1,j+1}^{4m+2,T} & \text{if } i = 0,2 \text{ and } 0 \leq j \leq 2m-1 \\ \beta_{i,j}^{4m+2,0} + \beta_{i-1,j}^{4m+2,0} & \text{if } i = 1,3 \text{ and } 0 \leq j \leq 2m \\ (T+1)\beta_{i,2m+1}^{4m+2,T} + T\beta_{i+1,2m+1}^{4m+2,T} & \\ \quad +T\beta_{i+2,2m+1}^{4m+2,T} + (T+1)\beta_{i+3,2m+1}^{4m+2,T} & \text{if } i = 0,2 \text{ and } j = 2m, \\ & \quad \text{or if } i = 1,3 \text{ and } j = 2m+1 \\ \beta_{i,j+1}^{4m+2,0} + \beta_{i-1,j+1}^{4m+2,0} & \text{if } i = 0,2 \text{ and } 2m+1 \leq j \leq 4m+1 \\ \beta_{i,j}^{4m+2,T} + \beta_{i-1,j}^{4m+2,T} & \text{if } i = 1,3 \text{ and } 2m+2 \leq j \leq 4m+1 \end{cases}$$

and

$$\gamma_{i,j}^{4m+1,0}\partial^{4m+2} = \begin{cases} \gamma_{i,j}^{4m+2,0} + \gamma_{i-1,j}^{4m+2,0} & \text{if } i = 0,2 \text{ and } 0 \leq j \leq 2m \\ \gamma_{i,j+1}^{4m+2,T} + \gamma_{i-1,j+1}^{4m+2,T} & \text{if } i = 1,3 \text{ and } 0 \leq j \leq 2m-1 \\ (T+1)\gamma_{i,2m+1}^{4m+2,T} + T\gamma_{i+1,2m+1}^{4m+2,T} & \\ \quad +T\gamma_{i+2,2m+1}^{4m+2,T} + (T+1)\gamma_{i+3,2m+1}^{4m+2,T} & \text{if } i = 0,2 \text{ and } j = 2m+1, \\ & \quad \text{or if } i = 1,3 \text{ and } j = 2m \\ \gamma_{i,j}^{4m+2,T} + \gamma_{i-1,j}^{4m+2,T} & \text{if } i = 0,2 \text{ and } 2m+2 \leq j \leq 4m+1 \\ \gamma_{i,j+1}^{4m+2,0} + \gamma_{i-1,j+1}^{4m+2,0} & \text{if } i = 1,3 \text{ and } 2m+1 \leq j \leq 4m+1. \end{cases}$$

Moreover, for $1 \leq l \leq T$, $0 \leq i \leq 3$ and $0 \leq j \leq 4m+1$,

$$\beta_{i,j}^{4m+1,l}\partial^{4m+2} = \begin{cases} 0 & \text{if } i = 0,2 \text{ and } 0 \leq j \leq 2m \\ \beta_{i,j}^{4m+2,l} + \beta_{i-1,j}^{4m+2,l} & \text{if } i = 1,3 \text{ and } 0 \leq j \leq 2m \\ \beta_{i,j+1}^{4m+2,l} + \beta_{i-1,j+1}^{4m+2,l} & \text{if } i = 0,2 \text{ and } 2m+1 \leq j \leq 4m+1 \\ 0 & \text{if } i = 1,3 \text{ and } 2m+1 \leq j \leq 4m+1 \end{cases}$$

and

$$\gamma_{i,j}^{4m+1,l}\partial^{4m+2} = \begin{cases} \gamma_{i,j}^{4m+2,l} + \gamma_{i-1,j}^{4m+2,l} & \text{if } i = 0,2 \text{ and } 0 \leq j \leq 2m \\ 0 & \text{if } i = 1,3 \text{ and } 0 \leq j \leq 2m \\ 0 & \text{if } i = 0,2 \text{ and } 2m+1 \leq j \leq 4m+1 \\ \gamma_{i,j+1}^{4m+2,l} + \gamma_{i-1,j+1}^{4m+2,l} & \text{if } i = 1,3 \text{ and } 2m+1 \leq j \leq 4m+1. \end{cases}$$

(b) *For* $0 \le l \le T-1$ *(so* $T \ge 1$*),* $0 \le i \le 3$ *and* $0 \le j \le 4m+2$*,*

$$\beta_{i,j}^{4m+2,l}\partial^{4m+3} = \begin{cases} \beta_{i,j}^{4m+3,l} & \text{if } i = 0,2 \text{ and } 0 \le j \le 2m \\ -\beta_{i-1,j}^{4m+3,l} & \text{if } i = 1,3 \text{ and } 0 \le j \le 2m \\ \beta_{i,2m+1}^{4m+3,l} - \beta_{i-1,2m+2}^{4m+3,l} & \text{if } i = 0,2 \text{ and } j = 2m+1 \\ \beta_{i,2m+2}^{4m+3,l} - \beta_{i-1,2m+1}^{4m+3,l} & \text{if } i = 1,3 \text{ and } j = 2m+1 \\ -\beta_{i-1,j+1}^{4m+3,l} & \text{if } i = 0,2 \text{ and } 2m+2 \le j \le 4m+2 \\ \beta_{i,j+1}^{4m+3,l} & \text{if } i = 1,3 \text{ and } 2m+2 \le j \le 4m+2 \end{cases}$$

and

$$\gamma_{i,j}^{4m+2,l}\partial^{4m+3} = \begin{cases} -\gamma_{i-1,j}^{4m+3,l} & \text{if } i = 0,2 \text{ and } 0 \le j \le 2m \\ \gamma_{i,j}^{4m+3,l} & \text{if } i = 1,3 \text{ and } 0 \le j \le 2m \\ \gamma_{i,2m+2}^{4m+3,l} - \gamma_{i-1,2m+1}^{4m+3,l} & \text{if } i = 0,2 \text{ and } j = 2m+1 \\ \gamma_{i,2m+1}^{4m+3,l} - \gamma_{i-1,2m+2}^{4m+3,l} & \text{if } i = 1,3 \text{ and } j = 2m+1 \\ \gamma_{i,j+1}^{4m+3,l} & \text{if } i = 0,2 \text{ and } 2m+2 \le j \le 4m+2 \\ -\gamma_{i-1,j+1}^{4m+3,l} & \text{if } i = 1,3 \text{ and } 2m+2 \le j \le 4m+2. \end{cases}$$

Moreover, for $0 \le i \le 3$ *and* $0 \le j \le 4m+2$, $\beta_{i,j}^{4m+2,T}\partial^{4m+3} = \gamma_{i,j}^{4m+2,T}\partial^{4m+3} = 0$.

(c) *For* $0 \le l \le T-1$ *(so* $T \ge 1$*),* $0 \le i \le 3$ *and* $0 \le j \le 4m+3$*,*

$$\beta_{i,j}^{4m+3,l}\partial^{4m+4} = \begin{cases} 0 & \text{if } i = 0,2 \text{ and } 0 \le j \le 2m+1 \\ \beta_{i,j}^{4m+4,l+1} + \beta_{i-1,j}^{4m+4,l+1} & \text{if } i = 1,3 \text{ and } 0 \le j \le 2m+1 \\ \beta_{i,j+1}^{4m+4,l+1} + \beta_{i-1,j+1}^{4m+4,l+1} & \text{if } i = 0,2 \text{ and } 2m+2 \le j \le 4m+3 \\ 0 & \text{if } i = 1,3 \text{ and } 2m+2 \le j \le 4m+3 \end{cases}$$

and

$$\gamma_{i,j}^{4m+3,l}\partial^{4m+4} = \begin{cases} 0 & \text{if } i = 0,2 \text{ and } 0 \le j \le 2m+1 \\ \gamma_{i,j}^{4m+4,l+1} + \gamma_{i-1,j}^{4m+4,l+1} & \text{if } i = 1,3 \text{ and } 0 \le j \le 2m+1 \\ \gamma_{i,j+1}^{4m+4,l+1} + \gamma_{i-1,j+1}^{4m+4,l+1} & \text{if } i = 0,2 \text{ and } 2m+2 \le j \le 4m+3 \\ 0 & \text{if } i = 1,3 \text{ and } 2m+2 \le j \le 4m+3. \end{cases}$$

(d) *For* $0 \le l \le T$, $0 \le i \le 3$ *and* $0 \le j \le 4m$*,*

$$\beta_{i,j}^{4m,0}\partial^{4m+1} = \gamma_{i,j}^{4m,0}\partial^{4m+1} = \begin{cases} \beta_{i,j}^{4m+1,0} - \gamma_{i-1,j}^{4m+1,0} + \gamma_{i,j+1}^{4m+1,T} - \beta_{i-1,j+1}^{4m+1,T} & \text{if } i = 0,2 \text{ and } 0 \le j \le 2m-1 \\ \gamma_{i,j}^{4m+1,0} - \beta_{i-1,j}^{4m+1,0} + \beta_{i,j+1}^{4m+1,T} - \gamma_{i-1,j+1}^{4m+1,T} & \text{if } i = 1,3 \text{ and } 0 \le j \le 2m-1 \\ \beta_{i,2m}^{4m+1,0} - \gamma_{i-1,2m}^{4m+1,0} + \gamma_{i,2m+1}^{4m+1,0} - \beta_{i-1,2m+1}^{4m+1,0} & \text{if } i = 0,2 \text{ and } j = 2m \\ \gamma_{i,2m}^{4m+1,0} - \beta_{i-1,2m}^{4m+1,0} + \beta_{i,2m+1}^{4m+1,0} - \gamma_{i-1,2m+1}^{4m+1,0} & \text{if } i = 1,3 \text{ and } j = 2m \\ \beta_{i,j}^{4m+1,T} - \gamma_{i-1,j}^{4m+1,T} + \gamma_{i,j+1}^{4m+1,0} - \beta_{i-1,j+1}^{4m+1,0} & \text{if } i = 0,2 \text{ and } 2m+1 \le j \le 4m \\ \gamma_{i,j}^{4m+1,T} - \beta_{i-1,j}^{4m+1,T} + \beta_{i,j+1}^{4m+1,0} - \gamma_{i-1,j+1}^{4m+1,0} & \text{if } i = 1,3 \text{ and } 2m+1 \le j \le 4m, \end{cases}$$

and also, for $1 \le l \le T$, $0 \le i \le 3$ *and* $0 \le j \le 4m$*,*

$$\beta_{i,j}^{4m,l}\partial^{4m+1} = \begin{cases} \beta_{i,j}^{4m+1,l} & \text{if } i = 0,2 \text{ and } 0 \le j \le 2m-1 \\ -\beta_{i-1,j}^{4m+1,l} & \text{if } i = 1,3 \text{ and } 0 \le j \le 2m-1 \\ \beta_{i,2m}^{4m+1,l} - \beta_{i-1,2m+1}^{4m+1,l} & \text{if } i = 0,2 \text{ and } j = 2m \\ \beta_{i,2m+1}^{4m+1,l} - \beta_{i-1,2m}^{4m+1,l} & \text{if } i = 1,3 \text{ and } j = 2m \\ -\beta_{i-1,j+1}^{4m+1,l} & \text{if } i = 0,2 \text{ and } 2m+1 \le j \le 4m \\ \beta_{i,j+1}^{4m+1,l} & \text{if } i = 1,3 \text{ and } 2m+1 \le j \le 4m \end{cases}$$

and

$$\gamma_{i,j}^{4m,l}\partial^{4m+1} = \begin{cases} -\gamma_{i-1,j}^{4m+1,l} & \text{if } i = 0,2 \text{ and } 0 \le j \le 2m-1 \\ \gamma_{i,j}^{4m+1,l} & \text{if } i = 1,3 \text{ and } 0 \le j \le 2m-1 \\ \gamma_{i,2m+1}^{4m+1,l} - \gamma_{i-1,2m}^{4m+1,l} & \text{if } i = 0,2 \text{ and } j = 2m \\ \gamma_{i,2m}^{4m+1,l} - \gamma_{i-1,2m+1}^{4m+1,l} & \text{if } i = 1,3 \text{ and } j = 2m \\ \gamma_{i,j+1}^{4m+1,l} & \text{if } i = 0,2 \text{ and } 2m+1 \le j \le 4m \\ -\gamma_{i-1,j+1}^{4m+1,l} & \text{if } i = 1,3 \text{ and } 2m+1 \le j \le 4m. \end{cases}$$

The proof of this lemma follows from easy computations, and so we omit it.

3.3. A basis of $\operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^n, A_T)$

Now, by using Lemma 3.4, we have a K-basis of $\operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^n, A_T)$ for $n \ge 1$:

Lemma 3.5. *For $m \ge 0$, we have*

(a) (1) *If $T = 0$, then* $\operatorname{Im}\operatorname{Hom}_{A_0^e}(\partial^{4m+4}, A_0) = \{0\}$.

(2) *If $T > 0$, then* $\{\gamma_{i,j}^{4m+4,l} + \gamma_{i-1,j}^{4m+4,l},\ \beta_{i+1,j}^{4m+4,l} + \beta_{i,j}^{4m+4,l},\ \beta_{i,k}^{4m+4,l} + \beta_{i-1,k}^{4m+4,l},\ \gamma_{i+1,k}^{4m+4,l} + \gamma_{i,k}^{4m+4,l} \mid 1 \le l \le T;\ i = 0,2;\ 0 \le j \le 2m+1;\ 2m+3 \le k \le 4m+4\}$ *is a K-basis of* $\operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^{4m+4}, A_T)$.

(b) (1) *If $T = 0$, then* $\{\gamma_{1,j}^{4m+1,0} - \beta_{0,j}^{4m+1,0} + \beta_{1,j+1}^{4m+1,0} - \gamma_{0,j+1}^{4m+1,0},\ \beta_{2,j}^{4m+1,0} - \gamma_{1,j}^{4m+1,0} + \gamma_{2,j+1}^{4m+1,0} - \beta_{1,j+1}^{4m+1,0},\ \gamma_{3,j}^{4m+1,0} - \beta_{2,j}^{4m+1,0} + \beta_{3,j+1}^{4m+1,0} - \gamma_{2,j+1}^{4m+1,0} \mid 0 \le j \le 4m\}$ *is a K-basis of* $\operatorname{Im}\operatorname{Hom}_{A_0^e}(\partial^{4m+1}, A_0)$.

(2) *If $T > 0$, then* $\{\gamma_{i+1,j}^{4m+1,0} - \beta_{i,j}^{4m+1,0} + \beta_{i+1,j+1}^{4m+1,T} - \gamma_{i,j+1}^{4m+1,T},\ \beta_{2,j}^{4m+1,0} - \gamma_{1,j}^{4m+1,0} + \gamma_{2,j+1}^{4m+1,T} - \beta_{1,j+1}^{4m+1,T},\ \gamma_{i+1,k}^{4m+1,T} - \beta_{i,k}^{4m+1,T} + \beta_{i+1,k+1}^{4m+1,0} - \gamma_{i,k+1}^{4m+1,0},\ \beta_{2,k}^{4m+1,T} - \gamma_{1,k}^{4m+1,T} + \gamma_{2,k+1}^{4m+1,0} - \beta_{1,k+1}^{4m+1,0} \mid i = 0,2;\ 0 \le j \le 2m-1;\ 2m+1 \le k \le 4m\} \cup \{\gamma_{i+1,2m}^{4m+1,0} - \beta_{i,2m}^{4m+1,0} + \beta_{i+1,2m+1}^{4m+1,0} - \gamma_{i,2m+1}^{4m+1,0},\ \beta_{2,2m}^{4m+1,0} - \gamma_{1,2m}^{4m+1,0} + \gamma_{2,2m+1}^{4m+1,0} - \beta_{1,2m+1}^{4m+1,0} \mid i = 0,2\} \cup \{\beta_{i,j}^{4m+1,l},\ \gamma_{i+1,j}^{4m+1,l},\ \gamma_{i,k}^{4m+1,l},\ \beta_{i+1,k}^{4m+1,l} \mid 1 \le l \le T;\ i = 0,2;\ 0 \le j \le 2m-1;\ 2m+2 \le k \le 4m+1\} \cup \{\beta_{i+1,2m+1}^{4m+1,l} - \beta_{i,2m}^{4m+1,l},\ \gamma_{i+1,2m}^{4m+1,l} - \gamma_{i,2m+1}^{4m+1,l},\ \beta_{2,2m}^{4m+1,l} - \beta_{1,2m+1}^{4m+1,l},\ \gamma_{2,2m+1}^{4m+1,l} - \gamma_{1,2m}^{4m+1,l} \mid i = 0,2;\ 1 \le l \le T\}$ *is a K-basis of* $\operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^{4m+1}, A_T)$.

(c) (1) *If $T = 0$, then* $\{\beta_{i+1,j}^{4m+2,0} + \beta_{i,j}^{4m+2,0} \mid i = 0,1,2;\ 0 \le j \le 4m+2\}$ *is a K-basis of* $\operatorname{Im}\operatorname{Hom}_{A_0^e}(\partial^{4m+2}, A_0)$.

(2) *If $T > 0$, then* $\{\beta_{i+1,j}^{4m+2,l} + \beta_{i,j}^{4m+2,l},\ \gamma_{i,j}^{4m+2,l} + \gamma_{i-1,j}^{4m+2,l},\ \beta_{i,k}^{4m+2,l} + \beta_{i-1,k}^{4m+2,l},\ \gamma_{i+1,k}^{4m+2,l} + \gamma_{i,k}^{4m+2,l} \mid i = 0,2;\ 0 \le l \le T-1;\ 0 \le j \le 2m;\ 2m+2 \le k \le 4m+2\} \cup \{\beta_{1,j}^{4m+2,T} + \beta_{0,j}^{4m+2,T},\ \beta_{2,j}^{4m+2,T} + \beta_{1,j}^{4m+2,T},\ \beta_{3,j}^{4m+2,T} + \beta_{2,j}^{4m+2,T} \mid 0 \le j \le 2m;\ 2m+2 \le j \le 4m+2\}$

$$\cup \begin{cases} \{\beta_{0,2m+1}^{4m+2,T} - \beta_{2,2m+1}^{4m+2,T},\ \beta_{1,2m+1}^{4m+2,T} - \beta_{3,2m+1}^{4m+2,T}\} & \text{if } \operatorname{char} K \mid 2T+1 \\ \{\beta_{1,2m+1}^{4m+2,T} + \beta_{0,2m+1}^{4m+2,T},\ \beta_{2,2m+1}^{4m+2,T} + \beta_{1,2m+1}^{4m+2,T},\ \beta_{3,2m+1}^{4m+2,T} + \beta_{2,2m+1}^{4m+2,T}\} & \text{if } \operatorname{char} K \nmid 2T+1 \end{cases}$$

is a K-basis of $\operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^{4m+2}, A_T)$.

(d) (1) *If $T = 0$, then* $\operatorname{Im}\operatorname{Hom}_{A_0^e}(\partial^{4m+3}, A_0) = \{0\}$.

(2) *If $T > 0$, then* $\{\beta_{i,j}^{4m+3,l},\ \gamma_{i+1,j}^{4m+3,l},\ \beta_{i+1,k}^{4m+3,l},\ \gamma_{i,k}^{4m+3,l} \mid 0 \le l \le T-1;\ i = 0,2;\ 0 \le j \le 2m;\ 2m+3 \le k \le 4m+3\} \cup \{\beta_{1,2m+2}^{4m+3,l} - \beta_{0,2m+1}^{4m+3,l},\ \beta_{2,2m+1}^{4m+3,l} - \beta_{1,2m+2}^{4m+3,l},\ \beta_{3,2m+2}^{4m+3,l} - \beta_{2,2m+1}^{4m+3,l},\ \gamma_{1,2m+1}^{4m+3,l} - \gamma_{0,2m+2}^{4m+3,l},\ \gamma_{2,2m+2}^{4m+3,l} - \gamma_{1,2m+1}^{4m+3,l},\ \gamma_{3,2m+1}^{4m+3,l} - \gamma_{2,2m+2}^{4m+3,l} \mid 0 \le l \le T-1\}$ *is a K-basis of* $\operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^{4m+3}, A_T)$.

The proof of this lemma follows from easy computations, and thus we omit it.

As an immediate consequence, we get the dimension of $\operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^n, A_T)$ for $n \ge 1$:

Corollary 3.6. *For $T \ge 0$, $m \ge 0$, and $0 \le r \le 3$,*

$$\dim_K \operatorname{Im}\operatorname{Hom}_{A_T^e}(\partial^{4m+r}, A_T) = \begin{cases} 16Tm & \text{if } r = 0 \text{ (where } m \ne 0) \\ 2T(8m+3) + 3(4m+1) & \text{if } r = 1 \\ 8T(2m+1) + 4(3m+2) & \text{if } \operatorname{char} K \mid 2T+1 \text{ and } r = 2 \\ 8T(2m+1) + 3(4m+3) & \text{if } \operatorname{char} K \nmid 2T+1 \text{ and } r = 2 \\ 2T(8m+7) & \text{if } r = 3. \end{cases}$$

3.4. A basis of $\operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^n, A_T)$

By using Lemma 3.4, we also have a K-basis of $\operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^n, A_T)$ for $n \geq 1$:

Lemma 3.7. *For $m \geq 0$, we have*

(a) (1) *If $T = 0$, then* $\operatorname{Ker}\operatorname{Hom}_{A_0^e}(\partial^{4m+4}, A_0) = \{0\}$.

(2) *If $T > 0$, then* $\{\beta^{4m+3,l}_{i,j},\ \gamma^{4m+3,l}_{i+1,j},\ \gamma^{4m+3,l}_{i,k},\ \beta^{4m+3,l}_{i+1,k} \mid i = 0, 2;\ 0 \leq l \leq T-1;\ 0 \leq j \leq 2m+1;\ 2m+2 \leq k \leq 4m+3\}$ *is a K-basis of* $\operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^{4m+4}, A_T)$.

(b) (1) *If $T = 0$, then* $\{\sum_{i=0}^{3} \beta^{4m,0}_{i,j} \mid 0 \leq j \leq 4m\}$ *is a K-basis of* $\operatorname{Ker}\operatorname{Hom}_{A_0^e}(\partial^{4m+1}, A_0)$.

(2) *If $T > 0$, then* $\{\sum_{i=0}^{3} \beta^{4m,0}_{i,j} \mid 0 \leq j \leq 4m\} \cup \{\beta^{4m,l}_{i+1,j} + \beta^{4m,l}_{i,j},\ \gamma^{4m,l}_{i,j} + \gamma^{4m,l}_{i-1,j},\ \gamma^{4m,l}_{i+1,k} + \gamma^{4m,l}_{i,k},\ \beta^{4m,l}_{i,k} + \beta^{4m,l}_{i-1,k} \mid i = 0, 2;\ 1 \leq l \leq T;\ 0 \leq j \leq 2m-1;\ 2m+1 \leq k \leq 4m\} \cup \{\sum_{i=0}^{3} \beta^{4m,l}_{i,2m},\ \sum_{i=0}^{3} \gamma^{4m,l}_{i,2m} \mid 1 \leq l \leq T\}$ *is a K-basis of* $\operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^{4m+1}, A_T)$.

(c) (1) *If $T = 0$, then* $\{\beta^{4m+1,0}_{0,j} + \gamma^{4m+1,0}_{0,j+1},\ \beta^{4m+1,0}_{i+1,j+1} - \gamma^{4m+1,0}_{i,j+1} + \gamma^{4m+1,0}_{i+1,j} - \beta^{4m+1,0}_{i,j},\ \gamma^{4m+1,0}_{2,j+1} - \beta^{4m+1,0}_{1,j+1} + \beta^{4m+1,0}_{2,j} - \gamma^{4m+1,0}_{1,j} \mid i = 0, 2;\ 0 \leq j \leq 4m\} \cup \{\gamma^{4m+1,0}_{0,j} + \beta^{4m+1,0}_{1,j} + \gamma^{4m+1,0}_{2,j} + \beta^{4m+1,0}_{3,j} \mid 0 \leq j \leq 2m+1\} \cup \{\beta^{4m+1,0}_{0,j} + \gamma^{4m+1,0}_{1,j} + \beta^{4m+1,0}_{2,j} + \gamma^{4m+1,0}_{3,j} \mid 2m+1 \leq j \leq 4m+1\}$ *is a K-basis of* $\operatorname{Ker}\operatorname{Hom}_{A_0^e}(\partial^{4m+2}, A_0)$.

(2) *If $T > 0$, then* $\{\beta^{4m+1,0}_{0,j} + \gamma^{4m+1,T}_{0,j+1},\ \gamma^{4m+1,0}_{i+1,j} - \beta^{4m+1,0}_{i,j} + \beta^{4m+1,T}_{i+1,j+1} - \gamma^{4m+1,T}_{i,j+1},\ \beta^{4m+1,0}_{2,j} - \gamma^{4m+1,0}_{1,j} + \gamma^{4m+1,T}_{2,j+1} - \beta^{4m+1,T}_{1,j+1} \mid i = 0, 2;\ 0 \leq j \leq 2m-1\} \cup \{\beta^{4m+1,T}_{0,j} + \gamma^{4m+1,0}_{0,j+1},\ \gamma^{4m+1,T}_{i+1,j} - \beta^{4m+1,T}_{i,j} + \beta^{4m+1,0}_{i+1,j+1} - \gamma^{4m+1,0}_{i,j+1},\ \beta^{4m+1,T}_{2,j} - \gamma^{4m+1,T}_{1,j} + \gamma^{4m+1,0}_{2,j+1} - \beta^{4m+1,0}_{1,j+1} \mid i = 0, 2;\ 2m+1 \leq j \leq 4m\} \cup \{\beta^{4m+1,0}_{0,2m} + \gamma^{4m+1,0}_{0,2m+1},\ \gamma^{4m+1,0}_{i+1,2m} - \beta^{4m+1,0}_{i,2m} + \beta^{4m+1,0}_{i+1,2m+1} - \gamma^{4m+1,0}_{i,2m+1},\ \beta^{4m+1,0}_{2,2m} - \gamma^{4m+1,0}_{1,2m} + \gamma^{4m+1,0}_{2,2m+1} - \beta^{4m+1,0}_{1,2m+1} \mid i = 0, 2\} \cup \{\gamma^{4m+1,T}_{0,j} + \beta^{4m+1,T}_{1,j} + \gamma^{4m+1,T}_{2,j} + \beta^{4m+1,T}_{3,j},\ \beta^{4m+1,T}_{0,k} + \gamma^{4m+1,T}_{1,k} + \gamma^{4m+1,T}_{2,k} + \beta^{4m+1,T}_{3,k} \mid 0 \leq j \leq 2m;\ 2m+1 \leq k \leq 4m+1\} \cup \{\beta^{4m+1,l}_{i,j},\ \gamma^{4m+1,l}_{i+1,j},\ \gamma^{4m+1,l}_{i,k},\ \beta^{4m+1,l}_{i+1,k} \mid 1 \leq l \leq T;\ i = 0, 2;\ 0 \leq j \leq 2m;\ 2m+1 \leq k \leq 4m+1\}$

$$\cup \begin{cases} \{\gamma^{4m+1,0}_{0,2m+1} + \gamma^{4m+1,0}_{2,2m+1},\ \beta^{4m+1,0}_{1,2m+1} + \beta^{4m+1,0}_{3,2m+1}\} & \text{if } \operatorname{char} K \mid 2T+1 \\ \{\gamma^{4m+1,0}_{0,2m+1} + \beta^{4m+1,0}_{1,2m+1} + \gamma^{4m+1,0}_{2,2m+1} + \beta^{4m+1,0}_{3,2m+1}\} & \text{if } \operatorname{char} K \nmid 2T+1 \end{cases}$$

is a K-basis of $\operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^{4m+2}, A_T)$.

(d) (1) *If $T = 0$, then* $\{\beta^{4m+2,0}_{i,j} \mid 0 \leq i \leq 3;\ 0 \leq j \leq 4m+2\}$ *is a K-basis of* $\operatorname{Ker}\operatorname{Hom}_{A_0^e}(\partial^{4m+3}, A_0)$.

(2) *If $T > 0$, then* $\{\beta^{4m+2,l}_{i+1,j} + \beta^{4m+2,l}_{i,j},\ \gamma^{4m+2,l}_{i,j} + \gamma^{4m+2,l}_{i-1,j},\ \gamma^{4m+2,l}_{i+1,k} + \gamma^{4m+2,l}_{i,k},\ \beta^{4m+2,l}_{i,k} + \beta^{4m+2,l}_{i-1,k} \mid i = 0, 2;\ 0 \leq l \leq T-1;\ 0 \leq j \leq 2m;\ 2m+2 \leq k \leq 4m+2\} \cup \{\sum_{i=0}^{3} \beta^{4m+2,l}_{i,2m+1},\ \sum_{i=0}^{3} \gamma^{4m+2,l}_{i,2m+1} \mid 0 \leq l \leq T-1\} \cup \{\beta^{4m+2,T}_{i,j} \mid 0 \leq i \leq 3;\ 0 \leq j \leq 4m+2\}$ *is a K-basis of* $\operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^{4m+3}, A_T)$.

The proof of this lemma follows from easy computations, and thus we omit it.

By the lemma above, we immediately have the dimension of $\operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^n, A_T)$ for $n \geq 1$:

Corollary 3.8. *For $T \geq 0$, $m \geq 0$, and $0 \leq r \leq 3$,*

$$\dim_K \operatorname{Ker}\operatorname{Hom}_{A_T^e}(\partial^{4m+r}, A_T) = \begin{cases} 16Tm & \text{if } r = 0 \text{ (where } m \neq 0) \\ 2T(8m+1) + 4m + 1 & \text{if } r = 1 \\ 8T(2m+1) + 4(5m+2) & \text{if } \operatorname{char} K \mid 2T+1 \text{ and } r = 2 \\ 8T(2m+1) + 20m + 7 & \text{if } \operatorname{char} K \nmid 2T+1 \text{ and } r = 2 \\ 2T(8m+5) + 4(4m+3) & \text{if } r = 3. \end{cases}$$

3.5. The Hochschild cohomology group of A_T

Now, by Lemmas 3.5 and 3.7, we have a K-basis of the Hochschild cohomology group $\mathrm{HH}^n(A_T)$ for $n \geq 0$:

Proposition 3.9. *For $T \geq 0$ and $m \geq 0$,*

(a) *If $T = 0$, then*

(1) $\{\sum_{i=0}^{3} \beta^{4m,0}_{i,j} \mid 0 \leq j \leq 4m\}$ *is a K-basis of* $\mathrm{HH}^{4m}(A_0)$.

(2) $\{\beta_{0,j}^{4m+1,0} + \gamma_{0,j+1}^{4m+1,0} \mid 0 \le j \le 4m\} \cup \{\gamma_{0,j}^{4m+1,0} + \beta_{1,j}^{4m+1,0} + \gamma_{2,j}^{4m+1,0} + \beta_{3,j}^{4m+1,0} \mid 0 \le j \le 2m+1\} \cup \{\beta_{0,j}^{4m+1,0} + \gamma_{1,j}^{4m+1,0} + \beta_{2,j}^{4m+1,0} + \gamma_{3,j}^{4m+1,0} \mid 2m+1 \le j \le 4m+1\}$ *is a K-basis of* $\mathrm{HH}^{4m+1}(A_0)$.

(3) $\{\beta_{0,j}^{4m+2,0} \mid 0 \le j \le 4m+2\}$ *is a K-basis of* $\mathrm{HH}^{4m+2}(A_0)$.

(4) $\mathrm{HH}^{4m+3}(A_0) = \{0\}$.

(b) *If* $T > 0$, *then@*

(1) $\{\sum_{i=0}^{3} \beta_{i,j}^{4m,0},\ \sum_{i=0}^{3} \beta_{i,2m}^{4m,l},\ \sum_{i=0}^{3} \gamma_{i,2m}^{4m,l} \mid 0 \le j \le 4m;\ 1 \le l \le T\}$ *is a K-basis of* $\mathrm{HH}^{4m}(A_T)$.

(2) $\{\beta_{0,j}^{4m+1,0} + \gamma_{0,j+1}^{4m+1,T} \mid 0 \le j \le 2m-1\} \cup \{\beta_{0,j}^{4m+1,T} + \gamma_{0,j+1}^{4m+1,0} \mid 2m+1 \le j \le 4m\} \cup \{\beta_{0,2m}^{4m+1,0} + \gamma_{0,2m+1}^{4m+1,0}\} \cup \{\gamma_{0,j}^{4m+1,T} + \beta_{1,j}^{4m+1,T} + \gamma_{2,j}^{4m+1,T} + \beta_{3,j}^{4m+1,T} \mid 0 \le j \le 2m\} \cup \{\beta_{0,j}^{4m+1,T} + \gamma_{1,j}^{4m+1,T} + \beta_{2,j}^{4m+1,T} + \gamma_{3,j}^{4m+1,T} \mid 2m+1 \le j \le 4m+1\} \cup \{\beta_{0,2m}^{4m+1,l},\ \gamma_{0,2m+1}^{4m+1,l} \mid 1 \le l \le T\}$

$$\cup \begin{cases} \{\gamma_{0,2m+1}^{4m+1,0} + \gamma_{2,2m+1}^{4m+1,0},\ \beta_{1,2m+1}^{4m+1,0} + \beta_{3,2m+1}^{4m+1,0}\} & \text{if } \mathrm{char}\, K \mid 2T+1 \\ \{\gamma_{0,2m+1}^{4m+1,0} + \beta_{1,2m+1}^{4m+1,0} + \gamma_{2,2m+1}^{4m+1,0} + \beta_{3,2m+1}^{4m+1,0}\} & \text{if } \mathrm{char}\, K \nmid 2T+1 \end{cases}$$

is a K-basis of $\mathrm{HH}^{4m+1}(A_T)$.

(3) $\{\sum_{i=0}^{3} \beta_{i,2m+1}^{4m+2,l},\ \sum_{i=0}^{3} \gamma_{i,2m+1}^{4m+2,l} \mid 0 \le l \le T-1\} \cup \{\beta_{0,j}^{4m+2,T} \mid 0 \le j \le 2m;\ 2m+2 \le j \le 4m+2\}$

$$\cup \begin{cases} \{\beta_{0,2m+1}^{4m+2,T},\ \beta_{1,2m+1}^{4m+2,T}\} & \text{if } \mathrm{char}\, K \mid 2T+1 \\ \{\beta_{0,2m+1}^{4m+2,T}\} & \text{if } \mathrm{char}\, K \nmid 2T+1 \end{cases}$$

is a K-basis of $\mathrm{HH}^{4m+2}(A_T)$.

(4) $\{\beta_{0,2m+1}^{4m+3,l},\ \gamma_{0,2m+2}^{4m+3,l} \mid 0 \le l \le T-1\}$ *is a K-basis of* $\mathrm{HH}^{4m+3}(A_T)$.

This proposition provides us with the main result in this paper.

Theorem 3.10. *For* $T \ge 0$ *and* $n \ge 0$, *the dimension of* $\mathrm{HH}^n(A_T)$ *is given as follows*: *For* $m \ge 0$ *and* $0 \le r \le 3$,

$$\dim_K \mathrm{HH}^{4m+r}(A_T) = \begin{cases} 2T+4m+1 & \text{if } r = 0 \\ 2T+8m+5 & \text{if } \mathrm{char}\, K \mid 2T+1 \text{ and } r = 1 \\ 2T+4(2m+1) & \text{if } \mathrm{char}\, K \nmid 2T+1 \text{ and } r = 1 \\ 2T+4(m+1) & \text{if } \mathrm{char}\, K \mid 2T+1 \text{ and } r = 2 \\ 2T+4m+3 & \text{if } \mathrm{char}\, K \nmid 2T+1 \text{ and } r = 2 \\ 2T & \text{if } r = 3. \end{cases}$$

Remark 3.11. There is an isomorphism $\mathrm{HH}^0(A_T) \to Z(A_T)$; $\phi \mapsto \phi(\sum_{i=0}^{3} e_i \otimes e_i)$ of algebras, where $Z(A_T)$ is the centre of A_T. Hence, by Proposition 3.9 (a)(1), $Z(A_T) \simeq K[x,y]/\langle x^{T+1}, xy, y^{T+1}\rangle$.

4. Hochschild cohomology ring modulo nilpotence of A_T for $T = 0$

Throughout this section, we keep the notation from the previous sections, and suppose that $T = 0$, namely, we only deal with the Koszul self-injective algebra A_0. For simplicity, we denote the algebra A_0 by A.

Recall that the Hochschild cohomology ring of A is defined as the graded ring $\mathrm{HH}^*(A) := \bigoplus_{t\ge 0} \mathrm{HH}^t(A) = \bigoplus_{t\ge 0} \mathrm{Ext}^t_{A^e}(A,A)$ with the Yoneda product. Let $\mathcal{N}_A$ be the ideal generated by all homogeneous nilpotent elements in $\mathrm{HH}^*(A)$. Note that $\mathcal{N}_A$ is a homogeneous ideal in $\mathrm{HH}^*(A)$. The purpose in this section is to find generators and relations of the Hochschild cohomology ring modulo nilpotence, $\mathrm{HH}^*(A)/\mathcal{N}_A$, of A. It is known that $\mathrm{HH}^*(A)/\mathcal{N}_A$ is a commutative graded algebra. We denote by $\mathrm{HH}^{4*}(A)$ the graded subalgebra $\bigoplus_{i\ge 0} \mathrm{HH}^{4i}(A)$ of $\mathrm{HH}^*(A)$, and by $\times$ the Yoneda product in $\mathrm{HH}^*(A)$.

Theorem 4.1. *There is the following isomorphism of commutative graded algebras*:

$$\begin{aligned} &\mathrm{HH}^*(A)/\mathcal{N}_A \simeq \mathrm{HH}^{4*}(A) \\ &\simeq K[z_0,z_1,z_2,z_3,z_4]/\langle z_0z_2 - z_1^2,\ z_0z_3 - z_1z_2,\ z_0z_4 - z_2^2,\ z_0z_4 - z_1z_3,\ z_1z_4 - z_2z_3,\ z_2z_4 - z_3^2\rangle \end{aligned}$$

with z_j *in degree* 4 *for* $0 \le j \le 4$. *Therefore* $\mathrm{HH}^*(A)/\mathcal{N}_A$ *is finitely generated as an algebra.*

Proof. First we establish the second isomorphism. For $0 \le j \le 4$ let $z_j := \sum_{i=0}^{3} \beta_{i,j}^{4,0} \in \mathrm{HH}^4(A)$, and for $k \ge 0$ define the homomorphism of A-A-bimodules $\sigma_j^k : Q^{k+4} \to Q^k$ by

$$\mathfrak{a}_{r,s}^{k+4} \mapsto \begin{cases} \mathfrak{a}_{r,t}^{k} & \text{if } s = j + t \text{ for some integer } t \text{ with } 0 \le t \le k \\ 0 & \text{otherwise.} \end{cases}$$

Then σ_j^k are liftings of z_j, namely, $z_j = \sigma_j^0 \partial^0$ and $\sigma_j^l \partial^{l+5} = \partial^{l+1} \sigma_j^{l+1}$ hold for $l \ge 0$. Thus, for integers $0 \le u, v \le 4$, it follows that the composite $z_v \sigma_u^4 : Q^8 \to A$ is given by

$$\mathfrak{a}_{r,s}^{8} \mapsto \begin{cases} e_r & \text{if } s = u + v \\ 0 & \text{otherwise.} \end{cases}$$

Note that the product $z_v \times z_u \in \mathrm{HH}^8(A)$ is represented by this map.

Now, for each positive integer t, let i_t be an integer with $0 \le i_t \le 4$. Then, for any $w \ge 2$, it can be shown by induction on w that the product $z_{i_1} \times \cdots \times z_{i_w}$ is represented by the map

$$Q^{4w} \to A;\ \mathfrak{a}_{r,s}^{4w} \mapsto \begin{cases} e_r & \text{if } s = \sum_{p=1}^{w} i_p \\ 0 & \text{otherwise.} \end{cases}$$

This tells us that $\mathrm{HH}^{4*}(A)$ is generated by $z_0, \ldots, z_4 \in \mathrm{HH}^4(A)$. Also, for two products $z_{j_1} \times \cdots \times z_{j_u}$ and $z_{k_1} \times \cdots \times z_{k_u}$ in $\mathrm{HH}^{4u}(A)$ (where $u \ge 1$ and $0 \le j_p, k_p \le 4$ for $1 \le p \le u$), we have that $z_{j_1} \times \cdots \times z_{j_u} = z_{k_1} \times \cdots \times z_{k_u}$ if and only if $\sum_{p=1}^{u} j_p = \sum_{p=1}^{u} k_p$. This gives the relation $z_i z_j - z_k z_l$ for $0 \le i, j, k, l \le 4$ such that $i + j = k + l$, and then, considering all possible elements in $\mathrm{HH}^{4*}(A)$, we get the second isomorphism.

Now, using the second isomorphism, we easily see that all elements in $\mathrm{HH}^{4*}(A)$ are not nilpotent. Furthermore, for $m \ge 0$ and $l = 1, 2, 3$, the images of all basis elements of $\mathrm{HH}^{4m+l}(A)$ of Proposition 3.9 (a) are in $\mathfrak{r}_A$, so that, by [13, Proposition 4.4], $\mathrm{HH}^{4m+l}(A)$ is contained in $\mathcal{N}_A$. Hence we have the first isomorphism. Therefore the proof of the theorem is completed. □

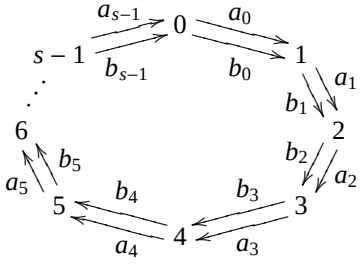
Finally we consider the graded centre of the Ext algebra $E(A) := \bigoplus_{i \ge 0} \mathrm{Ext}_A^i(A/\mathfrak{r}_A, A/\mathfrak{r}_A)$ of A. Recall that the graded centre $Z_{\mathrm{gr}}(E(A))$ of $E(A)$ is the subring of $E(A)$ generated by all homogeneous elements x in $E(A)$ such that $xy = (-1)^{|x| \cdot |y|} yx$ for all homogeneous elements $y \in E(A)$, where $|x|$ and $|y|$ denote the degree of x and y, respectively. Let $\mathcal{N}'_A$ be the ideal of $Z_{\mathrm{gr}}(E(A))$ generated by all homogeneous nilpotent elements. Since A is a Koszul algebra, we know from [1] that $Z_{\mathrm{gr}}(E(A))/\mathcal{N}'_A \simeq \mathrm{HH}^*(A)/\mathcal{N}_A$ as graded rings. Therefore, by Theorem 4.1, we have the following:

Corollary 4.2. *There is the following isomorphism of commutative graded rings:*

$$\begin{aligned} &Z_{\mathrm{gr}}(E(A))/\mathcal{N}'_A \simeq \mathrm{HH}^{4*}(A) \\ &\simeq K[z_0, z_1, z_2, z_3, z_4]/\langle z_0 z_2 - z_1^2,\ z_0 z_3 - z_1 z_2,\ z_0 z_4 - z_2^2,\ z_0 z_4 - z_1 z_3,\ z_1 z_4 - z_2 z_3,\ z_2 z_4 - z_3^2 \rangle \end{aligned}$$

with z_j in degree 4 for $0 \le j \le 4$.

Remark 4.3. We notice that our algebra A_T ($T \ge 0$) belongs to the class of more general algebras $B_{k,s}$ defined as follows: For $s \ge 1$, let Δ_s be the quiver



and for $k \geq 2$ let $J_k := \langle xy, x^k + y^k, yx \rangle \subseteq K\Delta_s$, where we put $x := \sum_{i=0}^{s-1} a_i \in K\Delta_s$ and $y := \sum_{i=0}^{s-1} b_i \in K\Delta_s$. Define the algebra $B_{k,s} := K\Delta_s / J_k$. Then $B_{k,s}$ is a self-injective algebra.

The results in this paper provide the computations of the Hochschild cohomology groups of $B_{k,s}$ for $s = 4$ and $k = 4T + 2$ ($T \geq 0$). On the other hand, if $s = 2$ and $k = 2m$ ($m \geq 1$), then we know from [14] generators and relations of the Hochschild cohomology ring of $B_{2m,2}$. (In fact $B_{2m,2}$ is isomorphic to the algebra Λ_N discussed in [14], where $N = m$ and the quiver of Λ_N has 2 vertices.) For the other cases, the computations of the Hochschild cohomologies seem to be unknown.

Acknowledgement

The author would like to thank the referee for valuable suggestions and helpful comments.
